PROFILE

Full-stack engineer since 2021. I build the parts of a product that touch money and paperwork: quoting, bookings, payments and payouts, and AI document tools. Engineering lead at Kinetichex.

EXPERIENCE

Lead Software Engineer May 2026 - Present
Kinetichex

- Lead development on client products, from requirements and estimates to release.
- Sterling Forge: built a jewellery casting portal with one other engineer. CAD upload to an instant price at the live metal spot, Stripe deposits and ACH, invoices, and production stages that follow the order type.
- LawReach: compliance workspace for Australian small businesses. Claude document analysis kept in-region, 85 legal obligations, statutory deadlines and evidence bundles.
- Calmer Ceuticals: ported 11 landing pages from Lovable into editable Shopify Liquid sections and cut font requests from 12-17 per page to two.
- SEO, GEO and AEO for a client running hotel and legal-information sites in Belgium: Python crawl and content audits joined with Search Console data, structured data, multilingual pages, and checks that search crawlers see the same content as the live app. Also built pages and features on two of the hotel sites, including a 20-guide content hub with walking maps and localised FAQ schema.

Development Team Lead Feb 2024 - Apr 2026
Bizdesire

- Uplevelit: led the team on an experience marketplace with 1:1 calls, group classes, live courses and Q&A, Twilio Video, Stripe payments, refunds and operator payouts. Hands-on on the booking and payment paths.
- Penbook: built a writing and reading platform solo. NestJS and MongoDB backend, server-side OpenAI writing tools, posts and book clubs.
- Rocket Rebates: built rebate discovery solo. Program imports into PostgreSQL, hybrid search, OpenAI reports and document checklists, S3 storage and an admin approval gate before filing.
- Ran requirements, estimates, code review, mentoring and technical interviews.

Associate React & Node.js Developer Oct 2022 - Dec 2023
Appcore Labs

- Built React and Next.js interfaces for SaaS and e-commerce products, with Redux for application state.
- Worked on cart, order and product flows, contributed to Node.js APIs and integrated Firebase Auth.

Frontend Developer (React) Oct 2021 - Sept 2022
Fyntune Solutions

- Built React and Redux interfaces for term, cyber and travel insurance, adapting shared components to each client’s branding and configuration.
- Maintained CI/CD pipelines and managed staging and production releases for white-label clients.

Selected work & technical skills

SELECTED PROJECTS

Sterling Forge: casting portal

Customer portal for a jewellery casting company. Customers upload a 3D model, get an instant price based on live metal prices, pay a deposit and track the order through production. I fixed a volume calculation that was underpricing some pieces by up to 4%, and added a nightly check so payments are confirmed even if Stripe's notification is missed.

Next.js / PostgreSQL / Stripe / Python

LawReach: compliance platform

Legal and compliance platform for Australian small businesses. It shows which legal obligations apply to a business, tracks deadlines, analyses uploaded documents with AI and prepares evidence bundles. I built the document analysis, the obligations and deadlines features, council lookup by postcode, and billing.

Next.js / TypeScript / Supabase / PostgreSQL / pgvector / Deno / Claude API / Stripe

Uplevelit: services marketplace

Marketplace where professionals offer 1:1 calls, group classes, courses and Q&A. I led the team and worked on bookings, video calls, payments, refunds and payouts to professionals.

React / Firebase / Stripe / Twilio Video

Rocket Rebates: rebate platform

Platform for finding and applying to rebate programs. Users search programs, get an AI-generated report on each one, upload the required documents and submit once an admin has approved the application. Built solo.

NestJS / PostgreSQL / AWS / OpenAI

TECHNICAL SKILLS

Core stack	React, Next.js, TypeScript, JavaScript, Node.js, NestJS, Python, PostgreSQL, MongoDB
Architecture	REST APIs, multi-tenant applications, role-based access, booking and payment workflows
AI integration	OpenAI, Anthropic Claude, document analysis, retrieval with pgvector, report generation and review workflows
Product services	Stripe (payments, ACH, payouts, refunds, webhooks), Supabase, Firebase, Drizzle, Twilio Video, SendGrid, Resend, Shopify
Cloud & delivery	Docker, AWS, GCP, Vercel, Modal, Cloudflare, GitHub Actions, Bitbucket Pipelines
Engineering lead	Requirements, estimates, web and mobile coordination, code reviews, technical interviews and mentoring

EDUCATION

B.Tech, Computer Science & Engineering

2017 - 2021

Baba Banda Singh Bahadur Engineering College
